PREFACE

THIS is intended as a handbook for the use of trustees and officers of institutions for children. It is hoped that it will be found practically useful to those who desire to establish a new institution or to reorganize an old one.

In Part I will be found concrete suggestions on organization, which are based upon actual experience. At the conclusion of this section, seven cottage plans are presented, views and floor plans of which will be found among the illustrations. These cottages represent the most recent and practical plans within the knowledge of the author. They have been selected with reference to their practical adaptability. Most of them represent cottages of the smaller type, accommodating from twenty to thirty children each.

Part II contains a plan for a cottage with outdoor sleeping porches, intended to suggest a type of cottage which it is believed will be desirable for many children in institutions.

In Part III, a study of fifty representative congregate and cottage institutions is presented. This study was made for the purpose of furnishing concrete information for those who contemplate the organization of institutions on the cottage plan.

Of many interesting institutions visited, a number have been left out of this inquiry either because they were too highly organized to meet average requirements, or because of the necessary limitations of such a study. The author takes this opportunity to acknowledge the courtesy and patience with which the superintendents and officers of all of the fifty institutions have aided in this study.

I

HOW TO ORGANIZE A CHILDREN'S
INSTITUTION

I

HOW TO ORGANIZE A CHILDREN'S INSTITUTION

THE question of the organization or reorganization of an institution for children is one of extraordinary importance. It is important from an economic point of view. For example: a small institution providing for one hundred children will involve the purchase of land and the erection of buildings at a cost of approximately \$100,000. It will involve the expenditure of from \$10,000 to \$20,000 per year, which means, if capitalized in the form of endowment, an endowment of from \$250,000 to \$500,000. If a new institution is built, without endowment, to be maintained by benevolent contributions, it means a tax upon the benevolent public of from \$10,000 to \$20,000 per year as long as the institution is maintained.

The proposition to establish an institution is even more grave from the standpoint of the welfare of the child. It is vitally important that such an institution shall be so organized as to accomplish the beneficent purpose for which it is intended; that it shall be so wisely planned and so faithfully administered as to insure the safety of the lives of the children who are to be committed to it, the development of their bodies to the highest degree of efficiency, wise, practical intellectual education, and the highest possible spiritual development.

The ordinary principles of common sense would dictate that where such large and sacred interests are involved the proposition should be considered with great care and deliberation, and that information should be sought from every available source; yet it is a common thing for institutions to be established on impulse, without the aid of expert advice. It was announced recently that a man in a southern state had died leaving an endowment of \$400,000 for an institution for girls. This man, who was without experience in philanthropic work, met an acquaintance on the street one day, and said, "If you wanted to invest some money to do good in this city, what would you do with it?" His friend replied, "I think I should establish some kind of an institution for girls." Acting on this suggestion the man employed an architect who was without experience in building institutions, and erected a handsome building. When the build-

ing was erected, and nearly ready for occupancy, a man of experience was invited in and asked to advise whether the institution should be used for an orphan asylum for girls or for an industrial school for girls, or for some other purpose. The founder was without information as to what type of institution was needed in that community, and the building had been erected without special adaptation to any one form of institutional work.

There are now in the city of Philadelphia two large endowments; one to make provision for orphan girls who have lost both parents, the other to make provision for orphan boys who have lost both parents. It is practically impossible to utilize these endowments for the purpose proposed by the donors, for the reason that very few children who have lost both parents are in need of institutional provision. Such children can readily be provided for in family homes, and nearly all of them are so cared for. If the generous men who made these bequests had consulted some of the wise people who are caring for children in Philadelphia, these endowments would have taken some other form.

A wealthy man in a northern state before his death built a children's home with a capacity of 250 children. When he died he left an endowment of \$400,000 for the maintenance of the home. He inserted a proviso in his will that \$10,000 per year of the income should be set apart for one hundred years to increase the endowment. The care of these children ought to cost about \$150 a year per child, but the trustees have had available from the endowment and other sources only about \$115 per child. They are unable to obtain donations for current expenses because they are popularly supposed to have an abundant income, and the children suffer for lack of adequate care because of the inconsiderate action of the founder.

In some states, for example, New York and Illinois, the law provides that charters for new children's institutions must be approved by the state board of charities or some other responsible body, before articles of incorporation can be issued. The Illinois law provides that "no association whose objects embrace the caring for dependent, neglected or delinquent children shall hereafter be incorporated unless the proposed articles of incorporation shall first have been submitted to the examination of the board of state commissioners of public charities, and the secretary of state shall not issue a certificate of incorporation unless there shall first be filed in his office the certificate of said board of state commissioners of public charities that said board has examined the said articles of incorpora-

HOW TO ORGANIZE A CHILDREN'S INSTITUTION

tion and that, in his judgment, the incorporators are reputable and respectable persons, the proposed work is needed, and the incorporation of such association is desirable and for the public good; amendments proposed to the articles of incorporation or association having as an object the care and disposal of dependent, neglected or delinquent children, shall be submitted in like manner."

This provision of law tends to the exercise of greater care and wisdom in the creation of new institutions or the reorganization of old ones.

COMMITTEE ON ORGANIZATION AND ITS DUTIES

Whenever it is proposed to organize a new institution for children, or to reorganize an old one, whether by individual beneficence or by an organized society or board of trustees, it would be wise to first appoint a carefully selected committee for the purpose of determining in advance what are to be the policy, methods and equipment of the institution. This committee should usually consist of both men and women, even though the institution is to care for one sex only. This committee should consult competent experts and should obtain information by correspondence and by visits to typical institutions of a similar character, both good and bad, in order to guide their judgment. Competent advice is now available in nearly every large city without cost other than the necessary traveling expenses, and the superintendents of all well organized institutions will cheerfully furnish information and advice on request.

Among the matters which must be decided by such a committee on organization are the following:

Is the Institution Needed? Is the proposed institution, or the proposed enlargement needed, or, in the case of an institution already established, ought the institution to be continued?

This question is often a practical one. In the city of Boston about two years ago the trustees of the Boston Female Asylum after grave deliberation came to the conclusion that that institution was no longer needed. They gradually made other provision for the inmates, sold the property, and organized in its place the Boston Society for the Care of Girls. Some thirteen different institutions for children have been closed during the past fifteen years in the state of Massachusetts, notwithstanding the large increase in population in that state. This has been made possible by the increased development of the plan of caring for both dependent and delinquent children in selected family homes.

In the state of Indiana, a few years ago, there were fifty county children's homes. Experience proved that so large a number of county homes was unnecessary and as a result some twelve of the Indiana county children's homes have been closed, and others are soon to be discontinued.

In the state of Wisconsin some years ago the Lutheran church was maintaining an orphanage. They then organized a "kinderfreund society" for the purpose of placing orphan children in private family homes, and a short time thereafter they decided to transform the orphanage into a school, and to provide for all of the children in family homes. It has frequently happened that benevolent people have created unnecessary institutions in communities where there was urgent need for institutions of a different class. The committee should make an exhaustive study in order to insure the wisest possible direction of the benevolent purpose of the donors.

Under What Auspices? It is necessary to decide under what auspices the institution shall be operated. Shall it be directed by the donor individually, as is done in a very few cases; shall it be directed by a self-perpetuating board of trustees; shall it be directed by a board of trustees selected by some other body, as, for example, by some church organization; shall it be managed by a board designated by the governor or the mayor or the judge of some court? It is necessary also to decide whether the institution will seek to come under public supervision where such public supervision is available, as in New York, Illinois, Indiana and Minnesota.

How to be Maintained. It is necessary to decide how the institution shall be maintained. Shall it be maintained entirely from endowment funds; shall it be maintained entirely from the gifts of a single donor; shall it be maintained from the revenue of some religious organization; shall it be maintained in whole or in part by funds to be solicited from year to year, and shall such funds be collected by volunteer unpaid collectors or shall paid solicitors be employed? Shall the institution seek a maintenance in whole or in part by appropriations from the public treasury, state, county or city? In a number of states, like New York, Pennsylvania, Maryland, Connecticut and California, many private institutions are supported in whole or in part by such appropriations.

Classes of Children to be Received. The committee must determine what class of children shall be received,—delinquent, dependent or defective children. If delinquent children are to be received, it must be decided what sex and ages shall be accepted and how the

children shall be received, whether by commitment from the courts or by the authority of their parents and guardians, or otherwise. If dependent children are to be received, the sex and ages must be determined, and if infants are to be received it must be decided whether they shall be received with or without their mothers and also whether sick children shall be accepted. If defective children are to be received, the committee must consider whether the institution will accept deaf children, blind children, feeble-minded children, epileptics, cripples, deformed children, incurable cases, etc.

Work to be Undertaken. Having decided what class of children is to be cared for, the next step is to consider what is to be done for them.

For delinquent children it will be necessary to provide education, including moral, religious, manual and domestic training, and also to provide for physical renovation and development.

For dependent children it will be necessary to determine whether children are to be brought up to young manhood and womanhood, as at Girard College, or whether they are to be kept until the age of eight or twelve, as in some orphan asylums; whether they are to be subject to recall of parents or relatives, or whether the institution is to serve as a temporary receiving home, to prepare the children for placing out in family homes. If temporary care is to be provided, it must be determined whether parents will be encouraged or required to meet a portion of the expense of maintenance. If children are to be placed in family homes, it must be determined whether the committee will insist upon securing complete guardianship or whether they will place children in family homes subject to recall by parents, and whether children are to be placed out on indenture or by adoption. Shall the institution maintain schools of its own or send its children to public schools; shall it undertake manual and industrial training, or plan to send its children out before they reach the age when such training is practicable?

If blind children are to be received, shall it be little children like those in the Sunshine Home for Blind Babies in New York, or older children, as in the Perkins Institution for the Blind in Boston? If deaf children, shall it be for little children, like those in the Pennsylvania Home for the Training in Speech of Deaf Children, or for older children of school age? If an institution for feeble-minded children is to be established, shall it be maintained on an expensive basis for the children of the rich who can pay liberally, or on a modest basis for children of parents in moderate circumstances who can pay little or

nothing for their support? If epileptics are to be received, similar questions will arise. If crippled and deformed children are to be cared for, the question will arise whether the institution shall be a hospital for orthopedic surgery, like that of the New York Society for the Relief of the Ruptured and Crippled and the Chicago Home for Indigent Crippled Children, or whether it shall be an asylum for the care of children who have already had their surgical opportunity, like the State Hospital School at Canton, Massachusetts. If incurable cases are to be received, the question will arise as to what diseases, if any, shall be barred. If a children's hospital be established, it must be decided what classes of cases shall be treated.

For all of these plans it will be necessary to determine in advance approximately the scale of expenditure to be adopted, because that decision will affect the decision as to the character of the buildings. The plant may be such as to absolutely prohibit an economical administration, while on the other hand the buildings may be so contracted and so cheap in their construction as to make it impossible to furnish adequate care for the children, or suitable accommodation for the employes.

Type of Institution. The committee must decide upon the type of the institution. Shall it be organized on the congregate plan with all of the children housed in one or two large buildings; shall it be organized on the cottage plan; or shall there be a combination of the cottage and congregate plans?

If the cottage plan is adopted, what shall be the cottage unit? Shall the cottages accommodate 50, or 30, or 20, or 16, or 12 children each, and what shall be the aggregate population? Shall there be general dining rooms, kitchens and school rooms, or shall each cottage be supplied with a dining room, a kitchen and a school room? Shall the children receive school instruction in the institution or shall they go to the public school? Shall there be a special building for industrial training, and if so, what shall be its equipment? Shall there be a central heating plant or shall there be a separate heating plant for each building? What method of heating shall be employed? Shall the institution pump its own water and provide its own electricity, or shall it obtain water and electricity from public service companies? Shall there be a laundry, shops, etc., connected with the central heating plant, or shall there be cottage laundries for the training of the older girls? Shall the baking be done in a separate plant, or shall it be done in the several kitchens? Shall there be a special building devoted to play and recreation? If so, shall it

NEW YORK CHILDREN'S AID SOCIETY BOYS' FARM, VALHALLA

contain gymnasium equipment and swimming baths? Shall there be a separate chapel building? Shall there be a separate administration building, and if so, what departments shall it contain? Shall the employes live in the cottages with the children, or shall they have individual cottages of their own, or shall there be a general residence building for employes?

Building Material. The committee must decide upon the material to be used in the buildings. Shall they be constructed of wood, brick, stucco, reinforced concrete, concrete blocks, hollow tile, or shall there be a variety of material, as, for example, in the Children's Village at Chauncey, New York? What amount of space in the several buildings shall be devoted to dormitories, sitting rooms, play rooms, school rooms, dining rooms, kitchens, baths and lavatories, clothes rooms and store rooms?

Selection of Site. The committee must decide upon a location. This decision involves the question whether the institution shall be located on a farm or on a small tract of land. It involves the question of the quality of the land. Shall it be suitable for general agriculture, or for market gardening, or for fruit raising? The site must be selected with reference to its healthfulness, drainage, water supply, adequate sunlight, etc. Shall a location be sought in the vicinity of a river or lake in order to secure beautiful surroundings, principally for bathing, etc.? The site must be selected with reference to the convenient location and distribution of buildings. For example, some juvenile reformatories are now dividing their land up into small tracts of 20 to 40 acres, each with its own cottage, stable and other buildings. The institution must be located with reference to transportation facilities, partly for convenience and economy in delivering building material and other supplies; partly for convenience of access by trustees, visitors, officers delivering children and parents visiting their children. (In some cases it may be desirable not to make the Home too accessible to visitors.) It is necessary also to take into account the convenience of employes in visiting a neighboring town for the purpose of shopping and recreation. It is difficult to keep good employes at a remote and inaccessible point.

Conclusion. It is desirable, if possible, that these preliminary steps be taken under the direction of the directors or trustees who are to manage the institution subsequently. The practice of having an institution built by a temporary commission and turned over afterwards to a permanent board of trustees has serious inconveniences, for the reason that the board of trustees almost invariably

discovers serious omissions on the part of the temporary commission, and sometimes the defects discovered prove to be radical and irredeemable.

It may be desirable to secure the services of a competent engineer, an expert on soil, and sometimes a landscape gardener in order to form an adequate judgment as to the availability of the proposed site; also to obtain the services of a competent and disinterested real estate man to advise as to the price which should be paid.

The donation of a site, even though it be a valuable property, is often a disadvantage. Many institutions have been wrongly located at a large ultimate loss because of a donation of land. It is a great mistake to allow a property worth hundreds of thousands of dollars to be disadvantageously located because some one is willing to make a donation of \$5,000 or \$10,000 in land or money. It is much better to be able to make a selection with sole view to the fitness of the location.

The architect should be selected early in the proceedings. If possible he should have had some practical experience in erecting institutions. If he lacks that experience it will be economical to send him at the expense of the committee to study similar institutions. It is very desirable that he should accompany the committee in any visits that they may make in order that they may receive concurrent impressions. The architect should receive adequate compensation to justify him in rendering the best possible service. There is no more economical expenditure than what is paid for adequate studies, detailed drawing and competent superintendence.

The architect's compensation should be so arranged that it will not be an advantage to him to increase the cost of the plant, and he should be a man of such character that he will not be in danger of sacrificing the practical utility of the building in order to build a monument for himself. There are hundreds of institutions in the United States which have been made showy and pretentious in order to produce a monumental effect while the provision for children and employes is inadequate. The architect should know how to secure beauty by the lines and proportions of the building rather than by expensive carving, terra cotta and ginger-bread work. He should know how to secure the maximum of valuable space, conveniently arranged, with the minimum of waste space and expensive material.

A wise committee will allow themselves sufficient time to work out their problem. It is absolutely impossible to make such a study as here proposed successfully within a period of 30 or 60 days.

PLANS FOR COTTAGE INSTITUTIONS PRESENTED*

There are presented herewith several plans for cottages which are considered especially meritorious:†

First: An elevation and floor plans for a children's cottage with outdoor sleeping porches, providing for a complete domestic establishment for twenty children and two care-takers. (See part II.)

Second: A view and plans of a cottage at the Jewish Protectory at Hawthorne, N. Y., accommodating thirty children, without kitchen or dining-room. This institution has a central kitchen and dining-hall. The dormitory arrangement of this cottage is especially good, providing windows on three sides. The sitting-rooms, also, are very cheerful.

Third: A view and floor plans of a cottage at the Indiana Girls' School, Clermont, Ind. This cottage has wings set at an angle which secure the maximum of light and air. The second floor is so arranged that the door of every girl's room is visible from the matron's room, giving a very complete oversight.

Fourth: A view and floor plans of a cottage at the Illinois Training School for Girls. This cottage is rectangular in form, securing the highest economy of construction. On the first floor, the assembly room at one end and the dining room at the other, extending clear across the building, minimize the amount of space required for corridors.

Fifth: Floor plans of the Philadelphia House of Refuge for Girls. In this cottage, like the Indiana cottage, the arrangement is such as to place the door of every girl's room under supervision from the room of the officer in charge. The doors of the girls' rooms are never locked, but an annunciator records the opening of any door.

Sixth: A view and floor plans of the Evanston receiving home of the Illinois Children's Home and Aid Society. This cottage is unique in the fact that a receiving ward is located on the third floor and is not connected with the rest of the house, having a separate fireproof staircase of its own and outdoor roof garden for exercise. Incoming children undergo a quarantine of about two weeks in this ward. On the second floor provision is made for twelve little children from one to five years of age. On the first floor are the kitchen,

* After writing the foregoing, the writer discovered in the files of the Russell Sage Foundation, a report on the Albany Orphan Asylum which admirably illustrates the principles here set forth. See pages 10-13.

† For the pages on which views and floor plans of these cottages may be found, see the List of Illustrations.

dining room, etc., and a day room for twelve older girls who have their dormitories on the second floor in a separate department from the smaller children.

This house is fireproof, being built of brick, reinforced concrete, and steel. It is so arranged as to divide the children into small groups. Only one dormitory contains more than four children, and there are several single rooms.

Seventh: A general view of the Albany Orphan Asylum with floor plans of one cottage. The Albany Orphan Asylum is an excellent example of the modern cottage institution. It provides 130 beds for children. The value of the plant per bed is \$1279. The annual current expense is \$191 per child. There are four cottages, each providing for about 32 children. Each cottage has two dormitories. There is an excellent arrangement of dressing-rooms, locker-rooms, etc. The dormitories have windows on two sides and are so arranged as to permit cross-ventilation through adjoining rooms.

REORGANIZATION OF THE ALBANY ORPHAN ASYLUM

The history of the reorganization of the Albany Orphan Asylum is an excellent illustration of the right way to execute such an undertaking. It is recorded as follows in a report of Hiram W. Slack, a special agent of the Russell Sage Foundation, who inspected the institution for the purpose of obtaining these facts.

For seventy-five years the asylum was carried on under the congregate plan. Certain considerations which led to a change of plan are presented in a report of the board of managers made in 1906, as follows: "For more than three-quarters of a century the asylum has quietly done its work and has cared for over 8,500 children. . . . But time has brought certain changes in the relation of the community with its charities. . . . The growth of public institutions has aroused, and occasional shortcomings have apparently justified, the suspicion that the individual is overwhelmed in the mass, and that personality may be destroyed by deadly routine. . . . The managers have long felt their inability to solve two important problems. They have been unable to avoid the congregation of the children in large buildings and to provide instruction in so-called 'manual training.' A means of correcting these defects did not appear until the opportunity recently given by the sale of the asylum property to the State Normal College. The purchase of another estate and the erection of new buildings now afford the long desired chance to remodel the institution on modern lines."

This report goes on to say that by reason of limitation of funds

the board of managers was compelled to decide whether "a great many children shall be taken from the streets and herded in large buildings, or a small number grouped in cottages and properly trained." At that time the number of children cared for was about 300. The board adopted the cottage plan and the number of children under care was reduced about two-thirds.

The board of managers presents the "Report of the Special Committee to Visit Orphan Asylums," in which is given a general statement of various methods of caring for neglected children and cogent reasons for the adoption of the cottage plan. This special committee visited other institutions of both sorts and gave careful consideration to general aspects of child-caring work as well as to local conditions and demands. Their recommendation was unanimous for the cottage plan. There was available the sum of \$140,000. Ten thousand dollars were expended upon a tract of land of more than 80 acres, which provides farm and garden opportunities for the asylum.

Plans for buildings were secured, and in 1907 and 1908 there were erected four cottages for children, an administration and school-room building, a residence building for superintendent and teachers, a building containing laundry and reception ward for children, and a stable. In all buildings except the stable the material used is brick upon concrete foundations. The architecture is simple but pleasing, and everywhere shows adaptability to the purposes for which intended. Such ornamentation as there is is effected by the use of the common material and does not detract from usefulness and a just sense of proportion.

The administration building contains, on the first floor, store rooms, offices, library and kindergarten. On the second floor is a commodious assembly room. Two wings are devoted to school rooms on the first and second floors, with manual training rooms in the basement. The school rooms are not large and would be inadequate should the number of children be increased.

The superintendent's cottage contains apartments also for the teachers, who form a family by themselves. Heat is supplied in common from the boilers in the basement and there is one kitchen for the two families. This arrangement is supposed to secure economy of operation as well as of structure, in that one set of servants may do the work for the two households.

The cottages form the most distinctive feature of this institution. In general plan and structure they conform to the type of the other buildings. A formal plan was adopted in placing them; they are arranged along two slightly diverging lines extending back from the main building. Other cottages may be placed along these lines as the capacity of the institution is increased. These cottages may well be taken as models in economy of construction, in general arrangement and harmony of apartments, and adaptability to the purpose of home-making. There are play rooms in the basements, with toilet facilities. On the first floor are the kitchen, dining room

and general sitting room, all large, convenient and attractive; and in addition, small quiet rooms where a child or an officer may meet a friend alone or read in seclusion. The dormitories on the second floor are large and airy, with bath-room and toilet adjoining. The matron's room occupies a commanding position at the front; and in addition there is a good-sized room set apart for occupancy by any child who may be slightly ailing or who for any reason should sleep apart from the larger number. On the third floor are two pleasant rooms for officers and large attic space for storage.

In the original plan of the board of managers it was designed to limit the cottages to about 25 children; but there are now fifteen beds in each of the two dormitories, which with the small sick-room, gives accommodation for 32 children in each cottage.

The accommodations for incoming children are not up to the standards of the asylum in other respects, though they are sanitary enough, and probably adequate for the number now being received. The second floor of the laundry building has been fitted up for this purpose, the large space being temporarily divided into small rooms by board partitions. But there are no general rooms for eating and play purposes, and the whole space is not well suited to this use. No hospital facilities are provided and the presence of the Albany Hospital nearby makes such provision at the asylum unnecessary.

It is the opinion of the matron that the increased cost of maintenance under the cottage plan is from one-fourth to one-third more than under the congregate plan, the increased cost being due chiefly to the demand for more attendants.

Although the institution has a large endowment, this is not at present sufficient to meet all expenses. The per capita cost is about \$3.50 per week. A charge is made to Albany County of \$2.00, and to other counties of \$2.50 per week for each child. The statistics of population indicate that only a small number are orphans. Desertion by one or both parents is the most common cause of dependency.

In no institution that I have visited is the ideal of home life for the child more successfully and consistently realized than here. All the conditions of comfortable and happy life are met in the cottages. The heating apparatus is there, and the water supply; and there the food is prepared and eaten. Throughout the institution there are no boiler houses or smoke stacks or water tanks to remind one of the aspects of a great manufacturing plant. Only, as in the ordinary community, the educational and the religious interests are common to all its members. The asylum affords an excellent illustration of the genuine cottage system.

CHILDREN'S COTTAGE WITH OUTDOOR SLEEPING PORCHES

Designed by Hastings H. Hart

II

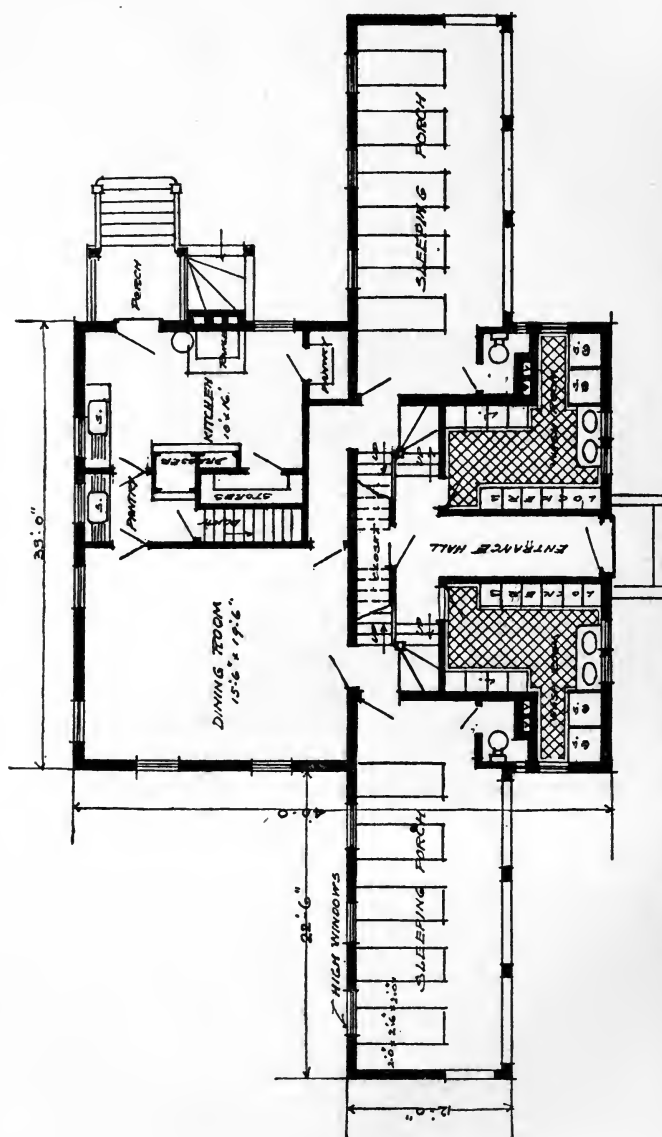

PLANS FOR A CHILDREN'S COTTAGE WITH OUTDOOR SLEEPING PORCHES

THE following suggestions, with the accompanying plans for a children's cottage with outdoor sleeping quarters, are original with the writer, having been embodied in suggestions made to the managers of the Laurel Industrial School for delinquent boys at Laurel, Va., in 1909.

At least one-half of all children sent to juvenile reformatories, orphan asylums, etc., are physically defective, either because of bad heredity, or because of poor feeding and unfavorable environment.

Many of these children are taken from insanitary surroundings of homes, and are put into dormitories in a congregate building. These dormitories have usually insufficient ventilation and sunlight. They are often placed on one side of the building, where cross ventilation cannot be secured, and they are so built that window ventilation cannot be had without a direct draft upon the heads of the sleepers. It is a common thing to find the sanitary conditions in such dormitories quite as bad as in the homes from which these unfortunate children come. The practice is now well established of providing outdoor sleeping porches, not only for tubercular patients and patients suffering from pneumonia, but also for crippled, deformed and anemic children, who are either sick or physically defective, yet these children sleep with impunity in the open, without deleterious effects.

If sick people and feeble anemic children can sleep in the open air with beneficial effects, what is to prevent the adoption of the same method for healthy growing children? It is proposed, therefore, that in building institutions for children, arrangements shall be made for outdoor sleeping porches for at least 33 per cent of the children. It is believed that this method might be profitably adopted for the entire institution population. Mrs. Martha P. Falconer, superintendent of the Philadelphia Girls' House of Refuge, has for years slept out of doors with a considerable portion of her girls.

PLANS FOR A COTTAGE WITH OUTDOOR SLEEPING PORCHES

PLANS FOR A COTTAGE WITH OUTDOOR SLEEPING PORCHES

Plans have been prepared, therefore, by the author, with the assistance of Mr. Robert W. Gardner, of New York, Architect, for a cottage to accommodate twenty children, with four outdoor sleeping porches for five children each, and with indoor dressing rooms, bath-rooms, study, dining room, kitchen, and apartments for house father and house mother. Should these plans be used for a juvenile reformatory cottage, the sleeping porches can be protected by steel lattice work, if desired, but it is believed that most superintendents would prefer to build them without such protection, relying upon the moral force of the institution, or locking up the day clothes of the boys at night.

Plans for sleeping porches have been prepared under the advice of the National Association for the Study and Prevention of Tuberculosis. The porches have been arranged in two stories, in order to bring the children under the close supervision of the house father and house mother. They have been so arranged with reference to the sitting room and bedroom of those officers, that the officers can observe each of the four sleeping porches at all hours of the night, without leaving their apartment. The electric lights on the porches will be controlled from the centre.

The ready observation of the four sleeping porches is provided for by setting the apartments of the officers on a different level from those of the children, in order to enable them to command a view of two floors at once.

On the ground floor are provided two dressing rooms with locker, baths and lavatories, for ten children each. From the dressing rooms, two stairways lead to the first floor sleeping porches. A night toilet is located adjacent to each sleeping porch, within the walls of the central building, in order to avoid danger of freezing.

On the same level with the first floor sleeping porches are provided kitchen, pantry and dining room for twenty-two persons; the intention being to make this cottage an independent domestic establishment, the work of which will be performed by the cottage mother, with the assistance of the children. Immediately above the dressing rooms are the sitting room and bedroom of the house father and house mother, who are expected to be husband and wife; the husband to be employed in some capacity in connection with the institution. These two rooms are supplied with large front windows, and are so arranged that cross ventilation can be provided.

Four feet higher than the officers' rooms are the second floor sleeping porches, and, on the same level, the children's study, arranged with windows on three sides, looking east, north and west. The study immediately adjoins the officers' apartments, and will be overlooked therefrom. By this arrangement the house mother, without leaving her own apartment, can exercise immediate oversight over the four sleeping rooms and the children's study.

The accompanying drawing illustrates the manner in which the sleeping porches can be overseen from the officers' apartments.

This cottage is planned to be built of glazed hollow tile, with floors of hollow tile and reinforced concrete. This construction will apply to the sleeping porches as well as to the central portion of the cottage. It will apply also to the second-story ceilings. The roof will be of tile, wooden joists and roof boards. The wooden portion of the roof will be the only inflammable part of the building, except the doors, windows and maple floors for the children's study and officers' apartments.

CROSS-SECTION, SHOWING SLEEPING PORCHES

The cost of this cottage has been carefully estimated by the architect, the figures for the tiles, cement and mason work being based on actual bids, and the figures for the plumbing, woodwork, roof work, metal work, etc., being based on the architect's experience in similar buildings. The entire estimated cost is \$11,100. The cost of this cottage could be much reduced in some places, by building of wood, as has been done at the Good Will Farm, Hinckley, Maine, and the State Agricultural and Industrial School at Industry, N. Y.; but it is believed that, in the long run, the fireproof construction will be both cheaper and more sanitary.

The commission appointed to select a site, and make preliminary plans for the New York State Training School for Boys, has

PLANS FOR A COTTAGE WITH OUTDOOR SLEEPING PORCHES

estimated the cost of building fifty dormitory cottages for sixteen boys each, at \$11,000 per cottage. This cottage will cost the same, and will provide for twenty children instead of sixteen, which is an increase of 25 per cent in capacity.

We are inclined to the opinion that within a few years new institutions for children will provide outdoor sleeping for at least the majority of the inmates. We are not prepared at this time to make a sweeping recommendation, but have no hesitation in expressing the belief that outdoor sleeping accommodation should be provided for at least 25 per cent of the children in the average juvenile reformatory, or home for dependent children.

III

A STUDY OF FIFTY COTTAGE AND CONGRE- GATE INSTITUTIONS

Boys' Cottage, Jewish Protectory, Hawthorne, New York

III

CONGREGATE AND COTTAGE INSTITUTIONS FOR CHILDREN

A STUDY OF FIFTY INSTITUTIONS

THIS study was undertaken for the information of boards of trustees who are contemplating the building or enlargement of institutions for children. Many juvenile reformatories, orphan asylums and children's homes are located on tracts of land which have become surrounded by buildings and are no longer adapted to the purpose, but have increased in value. Some of these have been sold and the proceeds have furnished the means for purchasing land and building modern institutions in the country.

In most cases, it is desired to adopt the cottage plan for the new institutions, but boards of trustees labor under the disadvantage of not having available concrete information as to the relative cost of building on the cottage plan, and also as to the increase, if any, in the necessary cost of operating institutions on the cottage plan. This study includes typical institutions on both the congregate and the cottage plan, in different parts of the country.

The method of the study has been for an agent of the Russell Sage Foundation to visit each institution, with the consent and co-operation of the management, to measure up each room in each building, to ascertain as nearly as possible the cost of the lands and buildings, and to obtain a statement of the current expenses of the institution for a period of one year. It was deemed impracticable and unnecessary to include a larger number of institutions in this study. Those dealt with, however, are regarded as typical. Some admirable institutions have been omitted because their standards of building and equipment are too high for the average board of trustees to adopt. Others of high merit are omitted because it is believed that a comparative exhibit would do them injustice without a fuller explanation than is possible under the limitations of this publication. The effort has been made to make the comparison of the different institutions on as uniform a basis as possible, but it has been impossible to make the comparisons exactly uniform, for the reason that the institutions have been built at different periods, of different materials, and on different plans.

The study covers 50 institutions, of which 23 are for delinquent children (6 on the congregate and 17 on the cottage plan), and 27 for dependent children (17 on the congregate plan and 10 on the cottage plan). The cottage plan is becoming the prevailing plan in the United States for delinquent children, while the congregate plan is still the prevailing plan for dependent children. Most of the institutions for dependent children are small establishments, whose inmates can readily be accommodated in a single building. Most of the institutions for delinquent children are growing large and most of them are supported or aided from public funds. The rapid enlargement of such institutions is a necessity, and the tendency is for them to adopt the most modern plans.

On the other hand, there has been a sharp check in the building of orphan asylums and other institutions for dependent children, owing to the rapid development of the placing-out system for the care of dependent children. The state schools for dependent children established in Michigan, Minnesota and Wisconsin have required no enlargement for many years. The building of county homes in Ohio and Indiana has come to a standstill. In Indiana eight or ten county homes have already been closed, and others are likely to go out of use. In Massachusetts the building of orphan asylums has been practically discontinued and at least twelve orphan asylums and children's homes have been closed within the past few years. These facts will account for the slower extension of the cottage system for dependent children; but some of the newer institutions of this class, like the New York Orphanage, the Albany Orphan Asylum, the New York Asylum for Colored Children, and the Rose Orphan Asylum at Terre Haute, have adopted the cottage plan.

The White House Conference, called by President Roosevelt at Washington, in 1909, pronounced emphatically in favor of the cottage plan, and indicated the number of 25 as a desirable cottage unit. The cottage unit in the New York Juvenile Asylum is 20; the proposed cottage unit for the New York Training School for Boys, which is designed for 800 boys, is 16.

Considerable difference of opinion has developed as to the materials to be used in constructing cottages. The cottages of the Good-Will Farm in Maine, built 1892 to 1909, and the New York State Agricultural and Industrial School at Industry, built 1905 to 1909, are of wood. The objections to this material are, first, its inflammable character, and, second, its lack of durability. The cottages at Industry, only three years old, already call for considerable

SECOND-FLOOR PLAN

FIRST-FLOOR PLAN

BOYS' COTTAGE, JEWISH PROTECTORY, HAWTHORNE, NEW YORK

repairs. Many institutions have adopted a substantial form of slow-burning construction, such as is found in the St. Charles School for Boys, in Illinois, and the Jewish Protectory, in New York.

The rapid improvement and cheapening of fire-proof construction, with the increasing cost of lumber, indicate the probability of complete fire-proof construction hereafter. Fire-proof cottages are now being constructed of hollow tile at a cost only a fraction above that for brick cottages with interior wood construction. Hollow tile can be laid with great rapidity, by workmen of moderate skill. They produce a wall which is impervious to moisture with a very large proportion of air space, producing warmth in winter and coolness in summer. By a combination of hollow tile and reinforced concrete construction, fire-proof floors are laid at moderate cost, with great rapidity and entire security. A similar combination is possible for the construction of staircases.

The hollow tile can be finished in stucco on the outside at a moderate cost. They permit of plastering on the inside without lath or furring, and the plastering is much less liable to damage than plastering of the old type. Partitions can be constructed of hollow tile; fire-proof stairways can be constructed at moderate expense of reinforced concrete; floors can be finished in concrete on top of the tiling for hall-ways, dormitories and dining rooms. Wooden floors can be laid on top of the concrete for sitting rooms and kitchens, though concrete floors are now being used quite freely for all purposes. The concrete floor is both cheap and permanent, if properly laid.

There is a decided sentiment in favor of separate heating plants for cottages in institutions for delinquents. The expense of installing a large distributing plant is considerable, and while the steam fitters stoutly maintain that steam can be distributed without appreciable loss, it is only necessary to make a winter visit to any cottage institution where steam is distributed in order to trace the covered steam pipes by the melting of the snow or the early sprouting of the grass in spring. It is true that there is some loss in firing by inexperienced boys, but this loss will be very small if the cottage managers are sufficiently alert. Under present building conditions, the saving in installing a distributing steam plant will suffice to cover the difference in the cost of fire-proof construction.

In some of the newer cottage institutions, for boys as well as for girls, a separate domestic establishment is provided for each cottage, including dining rooms, kitchens, and, in some institutions, bakeries. In institutions for delinquent girls, the desirability of this arrange-

COTTAGE AT THE INDIANA GIRLS' SCHOOL, CLERMONT, INDIANA. A MODEL COTTAGE FOR GIRLS

ment is unquestionable, not only to afford opportunity for the domestic training of the girls, but also to promote suitable classification and to develop normal social life. In institutions for girls it is desirable also that the laundry work should be distributed among the cottages as a means of domestic training.

In institutions for delinquent boys, the plan of a central kitchen, bakery and dining plant has generally prevailed, but recently a strong movement has developed in favor of a separate domestic plant for each cottage. This plan prevails at the New York State Agricultural and Industrial School, and is strongly urged by the commission which is preparing plans for the New York State Training School. In the latter case, the commission has advised that the cottage unit be made also the school unit. This school plan is not favored by most of the experienced superintendents of boys' reformatories.

STATISTICAL TABLES DISCUSSED*

The institutions under consideration have been divided, for purposes of convenient study, into four classes: institutions for delinquent children, congregate and cottage, and institutions for dependent children, congregate and cottage. We present herewith a summary of the examination made of each of the 50 institutions, which may be studied by the reader at his leisure. The information obtained has been summarized in tabular form for the convenience of those who desire to compare the different institutions.

These tables cannot be used for invidious comparisons without great injustice, because of the sharply varying conditions. For example, take the Cincinnati Children's Home, which shows the largest amount of floor space per child, and the largest per capita cost of plant of any of the congregate institutions for dependent children. The per capita cost is based upon the number of children who live in the home, but as a matter of fact the home contains a large amount of space which is devoted to day nurseries. If that space could be eliminated, there would be a corresponding reduction both in the amount of floor space and the cost of the plant.

TABLE I.—SUMMARY OF DETAILS SHOWN IN FOLLOWING TABLES

Table I is a consolidated statement summarizing the contents of the succeeding tables as to floor space per child, total floor space per bed, cost of plant per bed, and current expense per child. The

* See pages 55 to 86.

COTTAGE AND CONGREGATE INSTITUTIONS

INDIANA GIRLS' SCHOOL, CLERMONT, INDIANA
COTTAGE—FIRST-FLOOR PLAN

This cottage is admirably planned. The kitchen and laundry are cut off from the rest of the cottage by the dining room, avoiding kitchen smells and summer heat. The school rooms are admirably lighted. Hall space is saved by placing them at the end of the corridor. Suitable accommodations are provided for the officers. The domestic department gives opportunity for cooking, laundry work, etc., on the plan of an ordinary household.

INDIANA GIRLS' SCHOOL, CLERMONT, INDIANA

COTTAGE—SECOND-FLOOR PLAN

This floor provides separate rooms for 30 girls. The matron's room commands a view of every door on the floor. Girls' rooms are not locked, but if a girl opens her door an electric signal is given in the matron's room. The lighting of this building is ideal. Nearly every room gets sunlight at some hour in the day. This is an excellent example of the modern cottage for delinquent girls.

rank of each institution is given under each heading. For example, among cottage institutions for delinquents, the St. Charles School for Boys stands first in floor space per child for children's use, tenth in total floor space for all purposes per child, fourth in cost of plant per bed, and fourth in per capita expense. The Cleveland Boys' Home stands third in floor space for children's use, fifth in total floor space, eleventh in cost of plant, and first in current expense per capita (the last, because it is a new institution recently started).

Among congregate institutions for dependents, the Cleveland Jewish Orphan Asylum stands eighth in space for children's use, sixteenth in total floor space, sixth in cost of plant per child and fourth in current expense per child.

TABLES 2 AND 3.—FLOOR SPACE IN INSTITUTIONS FOR DELINQUENTS
—CONGREGATE AND COTTAGE

These two tables indicate the floor space devoted to children's use in dormitories, day rooms, dining rooms, etc. The space allotted to children in the congregate institutions is 10.4 per cent less than in the cottage institutions, as follows:

<i>Total Floor Space for Children's Use (Square Feet per Child)</i>						
Institutions for Delinquents:				<i>Minimum</i>	<i>Maximum</i>	<i>Average</i>
6 Congregate Institutions	.	.	.	95	191	120
17 Cottage Institutions	.	.	.	83	193	134

Out of 17 cottage institutions, one has less than 100 square feet, five have from 100 to 120 square feet, four have between 120 and 135 square feet, and seven have more than 135 square feet per child.

As the institution is built for the children, we may well examine the allowance of floor space for each child.

<i>Details of Floor Space for Children (Square Feet per Child)</i>						
Institutions for Delinquents:				<i>Minimum</i>	<i>Maximum</i>	<i>Average</i>

ILLINOIS TRAINING SCHOOL FOR GIRLS, GENEVA

The surprising fact appears that the average dormitory accommodation in the congregate institutions is materially larger than in the cottage institutions. This is doubtless due partly to the fact that boards of health have forbidden over-crowding in the older institutions, especially where the ventilation is defective. It is due partly to the fact that the cottage institutions have been carefully planned so as to economize dormitory space, and that the dormitories in most of the cottage institutions are so arranged as to permit of the most complete ventilation. For example, in the new cottages at the Children's Village at Chauncey, New York, and at the Jewish Protectory at Hawthorne, New York, the dormitories have windows on three sides. In other cottages arrangements are made so as to permit a free ventilation through gondola roofs, etc.

In some institutions the play rooms, school rooms or dining rooms serve also as sitting rooms. Experience proves that there is a great civilizing influence in neatly furnished sitting rooms, where children sit down quietly with their books or games. This influence cannot be secured by the use of a school room furnished with desks, or by the use of a bare play room with benches around the edge.

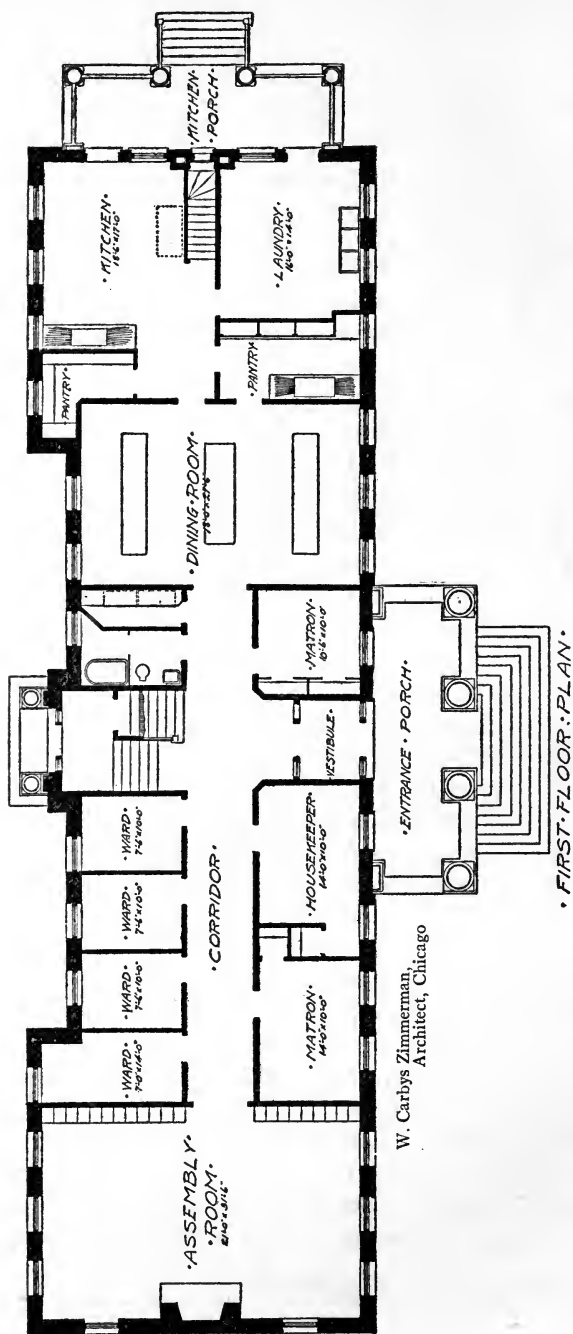

There is a great variety in the space allotted for chapels and assembly rooms. The average for both cottage and congregate institutions is 12 square feet per child. Out of 23 institutions, ten have 10 square feet or less, eight have between 10 and 15 square feet, and five have more than 15 square feet per child.

The kitchen accommodation is a matter of great importance in institutions. The Cleveland Boys' Home has 22 square feet per boy, the New York State Industrial School for Boys has 19 square feet, the Maine School for Boys 17 square feet; no other has more than 14 square feet per child.

Out of 17 cottage institutions, nine have less than 10 square feet, five have 10 to 14, and three have more than 14 square feet.

The matter of proper accommodations for officers is of great importance. It is necessary to avoid on the one hand the extravagance which prevails in some institutions of providing large, roomy apartments for officers while the children are huddled in insufficient space, and on the other hand to avoid the niggardliness which in some institutions leaves the officers without the ordinary decencies and comforts of life.

The work in these institutions is very exacting, and it is necessary that the employes shall have proper opportunity for rest, recrea-

• FIRST FLOOR PLAN •

STATE TRAINING SCHOOL FOR GIRLS, GENEVA, ILLINOIS—FABYAN COTTAGE

Fabyan Cottage is one of four cottages on identical plans, built in 1907 at a cost of \$21,000 each. They are built of pressed brick, with floors of maple and hard pine and staircases of oak. Each cottage provides for 26 girls in single rooms, with 5 employees. Each cottage contains an assembly room, but no school room. The kitchen and laundry are cut off from the rest of the house by the dining room and are arranged to permit household work on the plan of an ordinary family.

•SECOND FLOOR PLAN•

STATE TRAINING SCHOOL FOR GIRLS, GENEVA, ILLINOIS—FABIAN COTTAGE

The second floor provides separate rooms for 22 girls, in addition to 4 similar rooms on the first floor. Two matrons on the same floor have supervision of the girls. This cottage is typical of the modern idea of provision for delinquent girls.

W. Carlys Zimmerman,
Architect, Chicago.

COTTAGE AND CONGREGATE INSTITUTIONS

tion and social life, in order that they may be able to perform adequate service in behalf of the children.

The average floor space for officers' sitting rooms, dining rooms, bed rooms and baths per officer (including guest chambers), and for general purposes, is as follows:

<i>Floor Space for Officers' Quarters (Square Feet per Officer)</i>			
Institutions for Delinquents:	<i>Minimum</i>	<i>Maximum</i>	<i>Average</i>
6 Congregate Institutions	167	268	219
17 Cottage Institutions	154	714	279
<i>Floor Space for General Purposes (Square Feet per Child)</i>			
Institutions for Delinquents:	<i>Minimum</i>	<i>Maximum</i>	<i>Average</i>
6 Congregate Institutions	68	167	85
17 Cottage Institutions	55	232	107
<i>Total Floor Space for All Purposes (Square Feet per Child)</i>			
Institutions for Delinquents:	<i>Minimum</i>	<i>Maximum</i>	<i>Average</i>
6 Congregate Institutions	181	335	224
17 Cottage Institutions	202	477	277

TABLES 4 AND 5.—FLOOR SPACE IN INSTITUTIONS FOR DEPENDENTS
—CONGREGATE AND COTTAGE

<i>Total Floor Space for Children's Use (Square Feet per Child)</i>			
Institutions for Dependents:	<i>Minimum</i>	<i>Maximum</i>	<i>Average</i>
17 Congregate Institutions	74	187	112
10 Cottage Institutions	127	200	159

It will be observed that the floor space for children's use in the congregated institutions is 30 per cent less than in the cottage institutions. This increased space is distributed through all departments, as is indicated in the following statement:

<i>Details of Floor Space for Children (Square Feet per Child)</i>			
Institutions for Dependents:	<i>Minimum</i>	<i>Maximum</i>	<i>Average</i>
Dormitories			
17 Congregate Institutions	25	58	41
10 Cottage Institutions	32	54	44
Day Rooms or Sitting Rooms			
17 Congregate Institutions	0	49	6
10 Cottage Institutions	8	43	18
Dining Rooms			
17 Congregate Institutions	7	24	13
10 Cottage Institutions	0	21	15
Play Rooms			
17 Congregate Institutions	4	37	14
10 Cottage Institutions	6	70	26
School Rooms			
17 Congregate Institutions	0	30	15
10 Cottage Institutions	15	41	22

The enlarged space in cottage institutions is noticeable especially in day rooms, play rooms and school rooms.

Every visitor will note the difference in the manners, the com-

COMPARISON OF INSTITUTIONS FOR DELINQUENTS AND DEPENDENTS

TABLES 2 TO 5.—DETAILS OF FLOOR SPACE FOR CHILDREN

The comparison of institutions for delinquents with those for dependents is as follows:

<i>Square Feet of Floor Space for Children, per Child</i>			
Congregate Institutions:	<i>Minimum</i>	<i>Maximum</i>	<i>Average</i>
For Delinquents	95	191	120
For Dependents	74	187	112
Cottage Institutions:			
For Delinquents	83	193	134
For Dependents	127	200	159

It is interesting to note that while the congregate institutions for delinquent children have 7 per cent more space per child than those for dependents, the opposite is true of the cottage institutions, where the dependents have 18 per cent more than the delinquents.

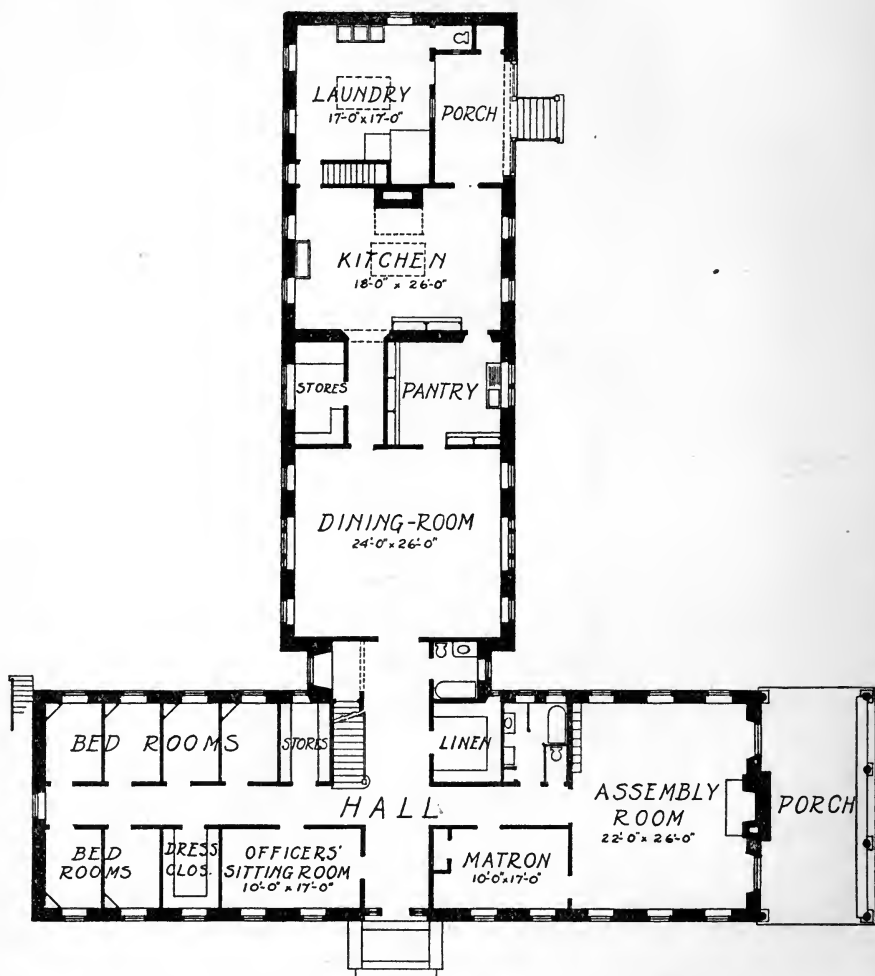

If we consider the total floor space for all purposes, we find as follows:

<i>Floor Space for All Purposes (Square Feet per Child)</i>			
Congregate Institutions:	<i>Minimum</i>	<i>Maximum</i>	<i>Average</i>
For Delinquents	181	335	224
For Dependents	171	459	220
Cottage Institutions:			
For Delinquents	175	477	277
For Dependents	250	433	330

While the delinquents have 2 per cent more total space in the congregare institutions, the dependents have 19 per cent more space in the cottage institutions.

The following statement compares the space available in congregare and cottage institutions for both delinquents and dependents,

COTTAGE AND CONGREGATE INSTITUTIONS

PHILADELPHIA HOUSE OF REFUGE FOR GIRLS, DARLING, PENNSYLVANIA
COTTAGE—FIRST-FLOOR PLAN

The first floor provides assembly room, dining room, kitchen, pantries, laundry, linen room, officers' sitting room, matron's room and six rooms for girls.

A STUDY OF FIFTY INSTITUTIONS

PHILADELPHIA HOUSE OF REFUGE FOR GIRLS, DARLING, PENNSYLVANIA
COTTAGE—SECOND-FLOOR PLAN

The second floor provides officers' rooms, linen rooms, bath rooms and 23 rooms for one girl each, making a total of 29 single rooms for girls. The institution being still incomplete, each room is now occupied by two girls, but this plan is intended to be temporary.

It is interesting to note that while the congregate institutions for delinquents have more space per child than the congregate institutions for dependents, the opposite is true of the cottage institutions, which show more space for dependents.

TABLES 6 AND 7.—COST OF PLANT, INSTITUTIONS FOR DELINQUENT CHILDREN

The cottage institutions show a marked advance in cost over the congregate institutions. The average cost of plant per bed was as follows:

<i>Average Cost of Plant per Bed, Congregate and Cottage Institutions</i>				
Institutions for Delinquents:	Minimum	Maximum	Average	
6 Congregate Institutions	\$516	\$940	\$650	
17 Cottage Institutions	487	1,906	840	

It must be borne in mind, however, that the most of the congregate institutions were erected when building cost much less than it costs at the present time. Only two cottage institutions exceed a cost of \$1100 per bed. The cottage institutions for delinquents may be divided into groups according to their cost, as follows:

<i>Cost of Cottage Institutions for Delinquents, per Child</i>				
\$500 Group				
Indiana Boys' School	\$487
Connecticut School for Boys	518

A STUDY OF FIFTY INSTITUTIONS

\$675 Group

Rhode Island, Sockanosset School for Boys	\$630
New Jersey State Home for Boys	660
Ohio Boys' Industrial School	672
Wisconsin Industrial School for Girls	729

\$800 Group

Ohio, Cleveland Boys' Home	\$752
Wisconsin Industrial School for Boys	767
Massachusetts, Lyman School for Boys	803
Minnesota State Training School	905

\$1000 Group

New York State Agricultural and Industrial School	\$979
Indiana Girls' School	988
Illinois Training School for Girls	1,004
Illinois, St. Charles School for Boys	1,055
Massachusetts State Industrial School for Girls	1,092

\$1900 Group

New York Jewish Protectory	\$1,884
Maine State School for Boys	1,906

The \$500 group includes the Indiana Boys' School (\$487), which was built 1867 to 1893, on a very plain and economical basis. The labor of the boys was utilized for the manufacture and laying of bricks and in other ways. The Connecticut institution (\$518) is also an old institution of limited accommodations. These two institutions provide only 224 and 211 square feet of floor space respectively, per boy, as against an average of 277 square feet for the cottage institutions, and an average of 224 for the congregate institutions.

The \$675 group includes the Rhode Island Sockanosset School for Boys (\$630), the New Jersey State Home for Boys (\$660), the Ohio Boys' Industrial School (\$672), and the Wisconsin Industrial School for Girls (\$729). The three institutions for boys provide a total floor space of 175, 224 and 208 square feet respectively, per boy. The institutions in this group were built many years ago and afford only moderate accommodations.

The \$800 group includes the new Cleveland Boys' Home (\$752), the Wisconsin Industrial School for Boys at Waukesha (\$767), the Lyman School for Boys at Westboro, Massachusetts (\$803), and the Minnesota State Training School at Red Wing (\$905). It will be observed that these four institutions represent about the average cost of cottage institutions for boys, which is about \$840. The Lyman School in Massachusetts and the State Training School in Minnesota are well equipped and thoroughly up to date. They were built at a

time when building conditions were very favorable. The Cleveland School for Boys is a new institution which has been built in an expensive time.

The \$1000 group includes the New York State Agricultural and Industrial School (\$979), Indiana Girls' School (\$988), Illinois Training School for Girls (\$1004), Illinois St. Charles School for Boys (\$1055), and the Massachusetts State Industrial School for Girls (\$1092). The three institutions for boys are all new institutions and are up to date. The Indiana Girls' School is also a new institution with an excellent equipment. The Massachusetts institution is an older institution built under more favorable building conditions.

The experience of 25 institutions indicates that it is possible to locate, build and equip a modern cottage institution for delinquent boys or girls at a cost not exceeding \$1000 per bed. There is a disposition in building cottage institutions for girls to provide a separate room for each girl. This has been done only partially at the Indiana Girls' School. If it should be adopted as a universal policy, it would involve an increase, probably, of 20 per cent, necessitating an appropriation of probably \$1200 per bed.

TABLES 8 AND 9.—COST OF PLANT, INSTITUTIONS FOR DEPENDENT CHILDREN

Average Cost of Plant per Bed, Congregate and Cottage Institutions

Institutions for Dependents:		Minimum	Maximum	Average
17 Congregate Institutions	\$376	\$1,671	\$ 758
10 Cottage Institutions	869	1,716	1,181

The 17 congregat institutions for dependents may be divided into groups according to their cost, as shown on page 46.

It will be observed that the average cost of the cottage institutions is 56 per cent greater than that of the congregat institutions. It must be considered, however, that the cottage institutions were most of them built at a more expensive time than the congregat institutions and that four of the congregat institutions cost from \$1,400 to \$1,670 per bed, while only one of the cottage institutions cost more than \$1,400 per bed.

Of the cottage institutions, among those most worthy of study may be mentioned the Manual Training School Farm at Glenwood, Illinois; the Albany Orphan Asylum; the Rochester Orphan Asylum; the Good Will Farm at Hinckley, Maine; and the State Public School at Owatonna, Minnesota.

10 Cottage Institutions (Dependents)	869	1,716	1,181

studied is 17 per cent more than for delinquents. The average cost of cottage institutions for dependents studied is 41 per cent more than the cottage institutions for delinquents. The difference is due chiefly

* Bids received; not yet built.

A STUDY OF FIFTY INSTITUTIONS

to the fact that most of the cottage institutions for delinquents were erected when building was cheap and most of the cottage institutions for dependents were erected recently when building had become very expensive.

TABLES 6 TO 9.—CURRENT EXPENSES PER CHILD, CONGREGATE AND COTTAGE INSTITUTIONS FOR DELINQUENTS

The cost of maintaining the congregate institutions for delinquents is shown by the tables to be 13.3 per cent less than in the cottage institutions. The following statement shows the

Current Expenses per Child, Congregate and Cottage Institutions

Institutions for Delinquents:	Minimum	Maximum	Average
6 Congregate Institutions (Total) . . .	\$125	\$234	\$161
Same (omitting school expenses) . . .	111	199	140
17 Cottage Institutions (Total). . .	128	286	195
Same (omitting school expenses) . . .	122	261	173

The expenses for cottage institutions may be classified as follows:

Expenses per Child, Cottage Institutions for Delinquents

	<i>Expenses per Child</i>
\$170 Class	
Indiana Boys' School	\$128
Rhode Island, Sockanosset School for Boys	156
Wisconsin Industrial School for Girls	169
Minnesota State Training School	169
Ohio Boys' Industrial School	171
Connecticut School for Boys	175
New Jersey State Home for Boys	175
Illinois Training School for Girls	185
Wisconsin Industrial School for Boys	190
\$245 Class	
Maine State School for Boys	\$227
Massachusetts, Lyman School for Boys	244
New York State Agricultural and Industrial School	245
Massachusetts Industrial School for Girls	246
Illinois, St. Charles School for Boys	246
Indiana Girls' School	251
New York Jewish Protectory	255

The schools of Wisconsin, Minnesota, Ohio, Connecticut and New Jersey show a remarkable agreement, ranging from \$169 to \$175 per capita. These institutions all stand well.

In the \$245 list we find that all of the institutions named except two are located in the East, where living expenses, fuel, etc., are higher than in the West. The list includes two institutions for girls, which as a rule are more expensive in administration than institutions for

COTTAGE AND CONGREGATE INSTITUTIONS

boys, largely for the reason that the boys are able to contribute more toward their own support.

Examining the current expenses in detail, we observe:

<i>Expenditures for Salaries per Child, Congregate and Cottage Institutions for Delinquents</i>			
Institutions for Delinquents:	<i>Minimum</i>	<i>Maximum</i>	<i>Average</i>
6 Congregate Institutions	\$23	\$ 79	\$37
3 Catholic Institutions	23	27	25
17 Cottage Institutions	28	107	57

The salaries in the congregate institutions average \$37 per child and in the cottage institutions \$57 per child. Examination reveals that this difference is due to the fact that the congregate institutions include three large Catholic institutions, providing for more than half of the children. The average amount paid per child for salaries in these Catholic institutions is from \$23 to \$27, while in the other congregate institutions the average amount paid for salaries is about the same as in the cottage institutions. The Catholic institutions enjoy the unpaid services of the brothers and sisters, who receive only a nominal allowance for the barest necessities.

The cost of fuel and light is \$11 per child in the congregate institutions, as against \$21 in the cottage institutions. Examination, however, shows that the congregate institutions include three Catholic institutions, which report cost for fuel as \$2, \$6 and \$8 respectively per child. This doubtless points to the fact that these institutions receive donations of fuel which are not included in their current expenses. If this fuel was included, the average rate would probably be at least \$16 per child instead of \$11. Even in that case the congregate institutions would show an expense of 24 per cent less per capita for fuel than the cottage institutions. This is partly due to the fact that the number of employes to be accommodated is larger in the cottage institutions.

In the matter of provisions we observe:

<i>Expenditures for Provisions per Child, Congregate and Cottage Institutions for Delinquents</i>			
Institutions for Delinquents:	<i>Minimum</i>	<i>Maximum</i>	<i>Average</i>
6 Congregate Institutions	\$47	\$61	\$54
17 Cottage Institutions	25	52	40

The congregate institutions show an average expense of \$54 per child as against \$40 in the cottage institutions. This is due to the fact that most of the cottage institutions are located on large farms where the inmates are able to raise a large part of their food. Even in the institutions for girls a material saving in provisions is indicated in the cottage plan. The girls' department of the New York Catholic Protectory (congregate) shows an annual expense of \$54 per child for food,

MAIN BUILDING, BOYS' DEPARTMENT

ST. PATRICK'S YARD
NEW YORK CATHOLIC PROTECTORY

A STUDY OF FIFTY INSTITUTIONS

while the girls' cottage schools in Massachusetts, Illinois and Indiana show a cost for food of \$33 to \$38 per capita.

The average cost of clothing in the congregate and cottage institutions is exactly the same, \$19 per child. This expense ranges from \$13 to \$32 per child (the Cleveland Boys' Home shows a higher rate, which is doubtless due to the fact that it is a new institution). School expenses, including salaries of teachers, average \$22, ranging from \$13 to \$38 per child.

It is encouraging to discover that the necessary increase in the maintenance cost of the cottage system is so small. The apparent difference is greater than the real difference, for the reason, as already indicated, that the congregate institutions include three Catholic institutions, which pay little for salaries.

EXPENSES PER CHILD, INSTITUTIONS FOR DEPENDENT CHILDREN

Current Expense per Child, Congregate and Cottage Institutions

Institutions for Dependents:	<i>Minimum</i>	<i>Maximum</i>	<i>Average</i>
17 Congregate Institutions	\$ 68	\$327	\$118
10 Cottage Institutions	159	272	196

The current expenses of the 17 congregate institutions for dependent children show an astonishing diversity, running from \$68 to \$327 per child. They may be grouped as follows:

<i>Under \$100</i>	<i>Total</i>	<i>Deduct Salaries</i>	<i>Living Expenses</i>
St. Joseph's Orphan Asylum, Erie, Pa. . . .	\$68	\$12	\$56
St. Rose's Orphan Asylum, Milwaukee, Wis. . .	70	9	61
German Orphan Asylum, Buffalo, N. Y. . . .	75	15	60
St. Michael's Orphan Asylum, Hopewell, N. J. .	84	16	68
St. Joseph Orphan Asylum, Cincinnati, O. . .	84	13	71
St. Francis' Orphan Asylum, New Haven, Conn.	84	12	72
St. Mary's Training School, Feehanville, Ill. . .	91	14	77
Protestant Orphan Asylum, Detroit, Mich. . .	97	34	63

The first seven institutions named above are Roman Catholic institutions, which enjoy the unpaid services of brothers and sisters. The contrast between these institutions and the other congregate institutions may be seen as follows:

<i>\$100 to \$200</i>	<i>Total</i>	<i>Deduct Salaries</i>	<i>Living Expenses</i>
William L. Gilbert Home, Winsted, Conn. . . .	\$112	\$33	\$ 79
Protestant Foster Home, Newark, N. J. . . .	121	25	96
Buffalo Orphan Asylum, Buffalo, N. Y. . . .	129	52	77
Children's Home, Cincinnati, O.	159	80	79
New Haven Orphan Asylum, New Haven, Conn.	184	46	138
Jewish Orphan Asylum, Cleveland, O.	191	51	140
Washburne Memorial Orphan Asylum, Minneapolis, Minn.	195	76	139
Fairfield County Temporary Home, Norwalk, Conn.	209	51	158

COTTAGE AND CONGREGATE INSTITUTIONS

The average salary expenditure for the seven Roman Catholic institutions is \$13 per child, while the average expenditure for the nine non-Catholic institutions is \$50 per child. The difference represents the voluntary unpaid service of the brothers and sisters in the Roman Catholic institutions. It should be remarked that the difference in cost of maintaining orphan asylums is partly due to the fact that some orphan asylums maintain schools and kindergartens of their own, while others send their children to the public schools. The reported school expenses run from nothing to \$41, yearly, per child.

If we compare the non-Catholic congregate institutions with the cottage institutions, all of which are non-Catholic, we shall find that the annual per capita cost of the congregate institutions is \$175 per child as compared with an average of \$196 for the cottage institutions, a difference of only \$21 per child. It must be remembered that many congregate institutions are over-crowded and the economy is obtained at the expense of the comfort and health of the children.

We have already discovered the difference in expenditure for salaries in institutions for dependent children. In order to make the figures available for comparison we give the following statement of

Expenditures for Salaries per Child

Institutions for Dependents:					<i>Minimum</i>	<i>Maximum</i>	<i>Average</i>
17	Congregate Institutions	.	.	.	\$ 9	\$81	\$29
10	Cottage Institutions	.	.	.	31	94	60

(The foregoing statement is subject to the remarks already made respecting the difference between salary expenditures of Catholic and non-Catholic institutions.)

In the matter of expenditures for provisions, the difference is in favor of the congregate institutions, whereas in the case of delinquent children the difference was in favor of the cottage institutions. In the latter case the children are able to aid materially in providing milk, vegetables, etc., thus reducing the cost of provisions. The following is a statement of

Expenditures for Provisions per Child

Institutions for Dependents:					<i>Minimum</i>	<i>Maximum</i>	<i>Average</i>
17	Congregate Institutions	.	.	.	\$32	\$91	\$42
10	Cottage Institutions	.	.	.	36	73	53

The apparently low rate in the congregate institutions is doubtless due partly to the fact that many Catholic institutions secure large donations of food supplies which are not figured into the budget. The seven Catholic congregate institutions show an average expendi-

A STUDY OF FIFTY INSTITUTIONS

ture of \$37 per child for food and the ten congregate Protestant institutions show an average of \$51 per child; while the ten cottage institutions show an average of \$53 per child, corresponding closely to the non-Catholic institutions reported above.

It must be borne in mind also that many congregate institutions are over-crowded, and that the reduced per capita cost is sometimes gained at the expense of the health and comfort of the children. This is clearly shown in the difference between the play-room conditions and the sitting-room conditions revealed by the two methods.

The current expenses of cottage institutions for dependent children average almost exactly the same as those of the cottage institutions for delinquent children—\$195 per child as against \$196 for the delinquents. There is a much wider diversity between the current expenses of the cottage and congregate institutions for dependent children than there is between the cottage and congregate institutions for delinquent children. This is due, as already suggested, to the very low per capita cost of the Catholic congregate institutions. The list given does not include any cottage institutions for Catholic children. If the Catholic congregate institutions were left out, the per capita cost of the congregate institutions would be approximately \$170 instead of \$118, which would make a difference of only about \$25 between the per capita cost of carrying on the cottage institutions and the congregate institutions.

TABLES 10 AND 11.—INSTITUTION PAYROLLS

Tables 10 and 11 are consolidated payrolls which are published by permission of the institutions represented. Differences in pay for the same service in some cases represent a general difference in the scale of wages for similar service in different communities; in other cases they represent a difference in standards as to the quality of service required. As a rule, the compensation of the higher grades of service is higher in the larger institutions.

NO INVIDIOUS COMPARISONS

In the study of the tables, the caution already given on page 31 should be borne in mind: namely, that these tables cannot be used for invidious comparisons without great injustice. The studies of the fifty institutions were made by three different agents, and while the effort was made to standardize the work, allowance must necessarily be made for the personal equation.

Attention has already been called to the accidental circumstances which may cause differences in the per capita rate of current expenses. In like manner apparent differences in the cost of the plant are often due to accidental circumstances. For example, in one institution the attics and basements are left vacant for the reason that the best authorities do not consider them desirable space for children's use. In other institutions both basements and attics are utilized for domestic purposes. In a two-story building this would double the amount of floor space available with a comparatively small addition to the cost of the building. It is manifest that unfavorable comparisons in such cases might be very unjust.

The same considerations may affect the comparison of floor space available for different purposes. In one institution the superintendent will report unused basements as storerooms and they will figure into the available capacity. It was a nice question in some cases whether temporary wooden pavilions costing from \$100 to \$500 should be counted as play rooms or whether they should be regarded simply as sheds. The showing as to play room space would be radically affected by the decision.

The effort has been made to treat all of the institutions as nearly on the same basis as possible. While mistakes may be made as to individual institutions, it is believed that the combined results will be found sufficiently accurate for practical purposes.
